Lantern Data Sheet

Lantern name : **Oxford**

code : **ML012**

By far our most popular fabricated lanterns are our range of 4-sided. Covering a total of 7 sizes over the range, the ever popular Knightsbridge and Regents Park remain the customer's favourite. These highly versatile lanterns can be either fitted to brackets, fitted onto post or plinths for that extra finishing touch, fitted flat to walls (see our range of half-lanterns) or fitted to columns (although some of the smaller lanterns in the range may not be suitable). Years of experience and progress have resulted in this durable and highly decorative solution to most domestic lighting requirements.

Half versions of these lanterns are also available. With a white, powder-coated back-plate, the half-lanterns fitted directly to a wall or partition and remains a popular lighting solution for reception rooms, halls and walled walkways.

Lantern Dimensions
