

MW183 Stretton

Product Description

The Liberty Split Ring System has been developed to satisfy both the engineers need for performance, durability, ease of maintenance and ever increasing specification demands and the designers dream of having the flexibility to be able to develop a purpose built lantern that is ideal for a project's purpose rather than being a compromise of that ideal. All this and not having to pay through the nose for it. Our engineers worked on the principal that if you have a strong foundation you can build anything on top.

The Split ring foundation can accommodate, within reason, any style of upper body from hemispheres to pyramids and numerous glazing options from flat glass to spherical. The system's simplicity makes it extremely easy to work with, install and maintain.

Product Features

Dimensions

Height: **340mm** | Width **722mm**

Construction

Hood: **Heavy gauge aluminium spinning**

Shade: **Heavy gauge aluminium spinning**

Body: **Heavy Die cast aluminium foundation rings**

Weight: **18kg**

IP Rating: **66**

Glazing

One-piece UV stabilized, clear polycarbonate bowl as standard. Structured, frosted, tinted & opal glazing available on request..

Guarantee

10 years as standard

Mounting Options

Top fixed

Cradle fixed

Finish

Marine specification powder coat to any BS or RAL colour

Gear

- Mercury
- Metal Halide
- Sodium
- LED Modules

All lamps & gear can be catered for up to 400w

Optics

- SGS203
- SGS252
- SGS253
- Refractor
- Louvre

Photocell

All photocells can be catered for

PHILIPS
Lamps, Gear & Optics
used as standard
